**Subject:** Summary  
**Attachments:** Partial Summary of Potential Environmental Violations 7.10.14.pdf; Buffer Clearing 7.10.14.pdf

Dear Chan, Patrick, and Officer Breazeal,

The attached file attempts to summarize the potential violations in our neighborhood. I know we have provided a variety of different material in the past but we want to share as much information as possible to help facilitate the investigation. Much of our past material has focused on different smaller areas of concern but this slide attempts to provide a high-level view of the entire scope of activity that we are aware of.

Additional activity highlighted in the slide that we have not included in previous material include:

- The installation of a drainage system in the "middle field" of the property
- The installation of new underground drainage systems running in line with the new roads (not depicted but included from eyewitness accounts of the work)
- A more complete understanding of new drainage ditches that run along the entire perimeter of the wetland/property border
- A more complete understanding of new road construction (though new roads in the forested area east of the wetland are not depicted)
- The location of new culverts over Type N and Type F aquatic areas

Additionally, the neighborhood is concerned that the extent of earth moving and alteration may interfere with core samples or other evidence gathering that may be conducted during a site visit.

Finally, the land owner continues to cut the vegetation directly adjacent to the aquatic areas (as of yesterday - see attached pictures) and we believe that may need immediate attention. We know that the vegetation provides an important function in this critical buffer area (to shade the stream, for example) and do not believe this type of trimming is allowed.

Thank you for your attention to this matter and we are happy to help or cooperate in any way needed!
